

A Comprehensive Approach to Project Engineering

WAGO Solution Builder

This engineering software solution is tailored to building automation and provides a comprehensive, efficient way to create solutions throughout the entire lifecycle of your building. Additionally, you can set up all your projects on a Web interface.

Benefits for Your Building Project

A Comprehensive Approach

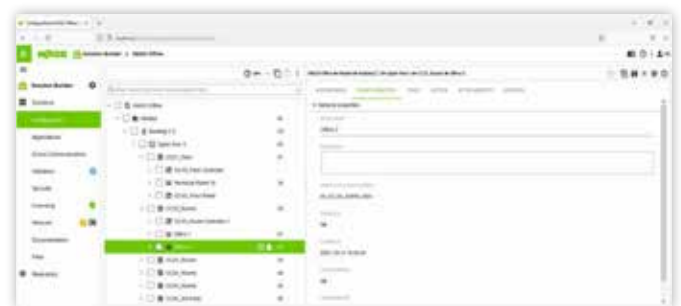

WAGO Solution Builder supports the project from the contract award process, to commissioning, execution and documentation, to periodic servicing and hardware/software maintenance.

Bulk Processing

WAGO Solution Builder was developed for processing large data volumes in building automation.

Synchronization

When you create a solution with controllers offline, it is transferred to the devices on a job-by-job basis, including your settings and applications.

Project Documentation

WAGO Solution Builder automatically creates the required project documentation with just one mouse click. You'll benefit from clear organization.

Added Value Throughout Your Building's Lifecycle

Planning

The project structure consisting of the building architecture, devices and data points, is already set up and maintained in WAGO Solution Builder during the building automation planning phase.

Construction

Complete controller commissioning workflow during the construction phase; clear organization of large projects.

Reuse, Migration and Expansion

Changes in building requirements can be handled efficiently by modifying application templates and synchronizing data.

Operation & Maintenance

A uniform data basis for building operation and equipment maintenance, including device management.

Advantages for System Integration in Your Project

Efficient & Clever

- Time savings and error minimization during engineering
- Clear organization of (large) projects into solutions
- Employees can work on a project in parallel and easily transfer data among themselves
- Device management for many controllers, even for maintenance and service
- Complete controller commissioning workflow
- Configure applications without a programming background (IEC know-how) and transfer them to the device
- Easy basic cybersecurity protection for the controllers
